

Internxt

Series A investment round.

Internxt aims to enrich life through revolutionary technology. The goal is to create a vast range of **innovative mass-market services** that disrupts various technology industries.

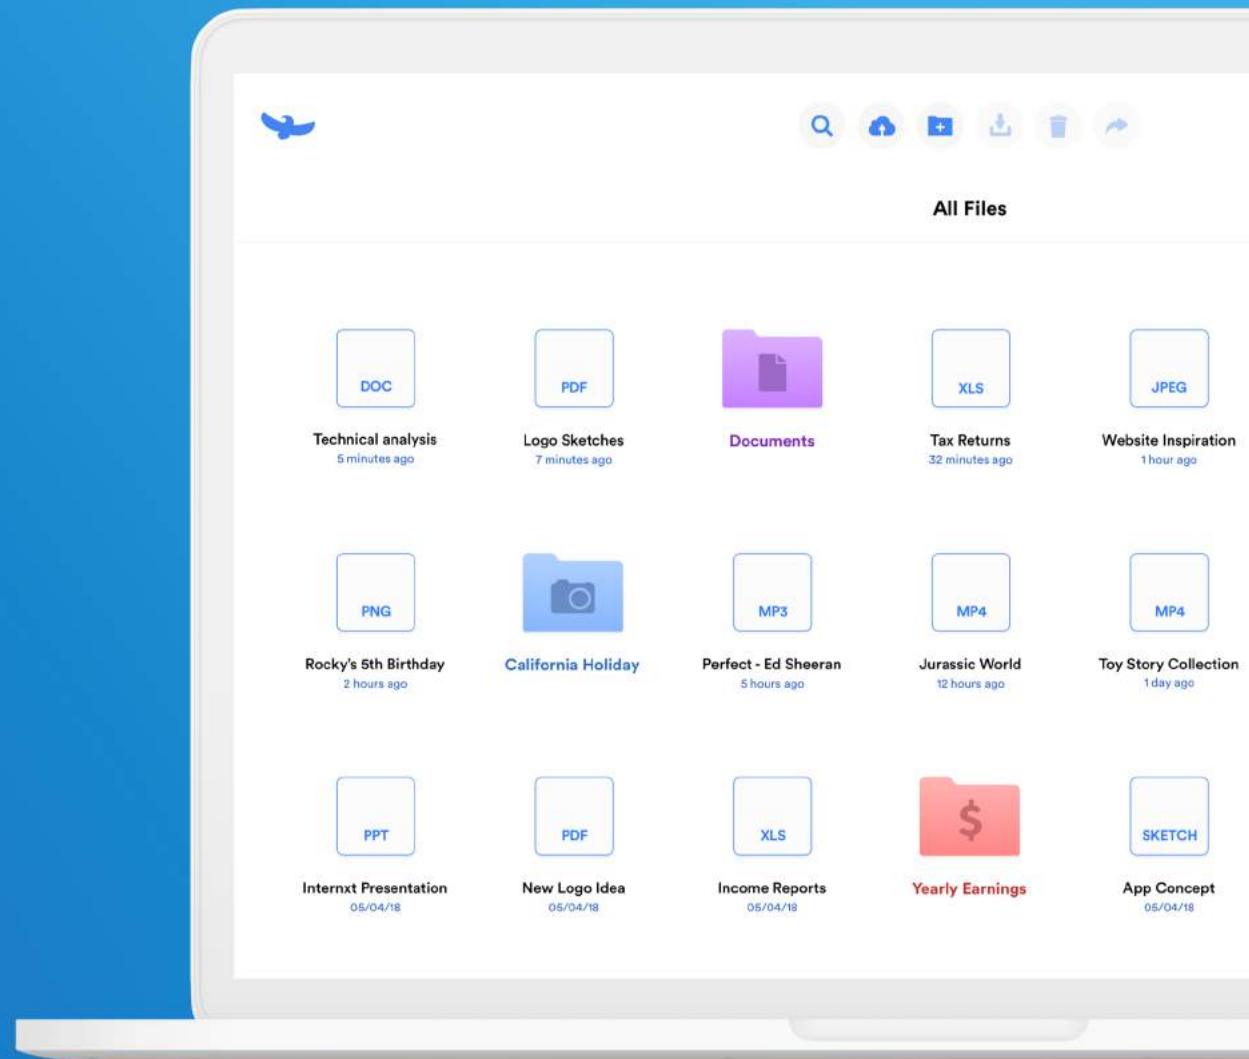

Founded in July 2017. Completed a small seed round through Initial Coin Offering (non-equity round). Since then, salary expenses have averaged €7,000/mo. Marketing expenses have averaged €3,000/mo. With our current funds and growth forecasts, we estimate we can keep running without making any profits throughout all 2019. We expect to be profitable by the end of 2019. Ideally, we'd like to close a Series A (equity round) before that, so that we can keep focusing on growth, instead of switching our focus to increasing our profits to ensure we are cashflow positive.

XCloud

Secure cloud storage.

XCloud

Secure cloud storage.

Files are end-to-end encrypted, split into pieces, and then distributed amongst different machines around the world. Personal data is a part of the distributed network and no longer sitting in one central location.

X Cloud beta available since September 2018 (X Cloud web). Commercial release in March 2019, which will come with desktop, web and mobile, as well as API.

1GB

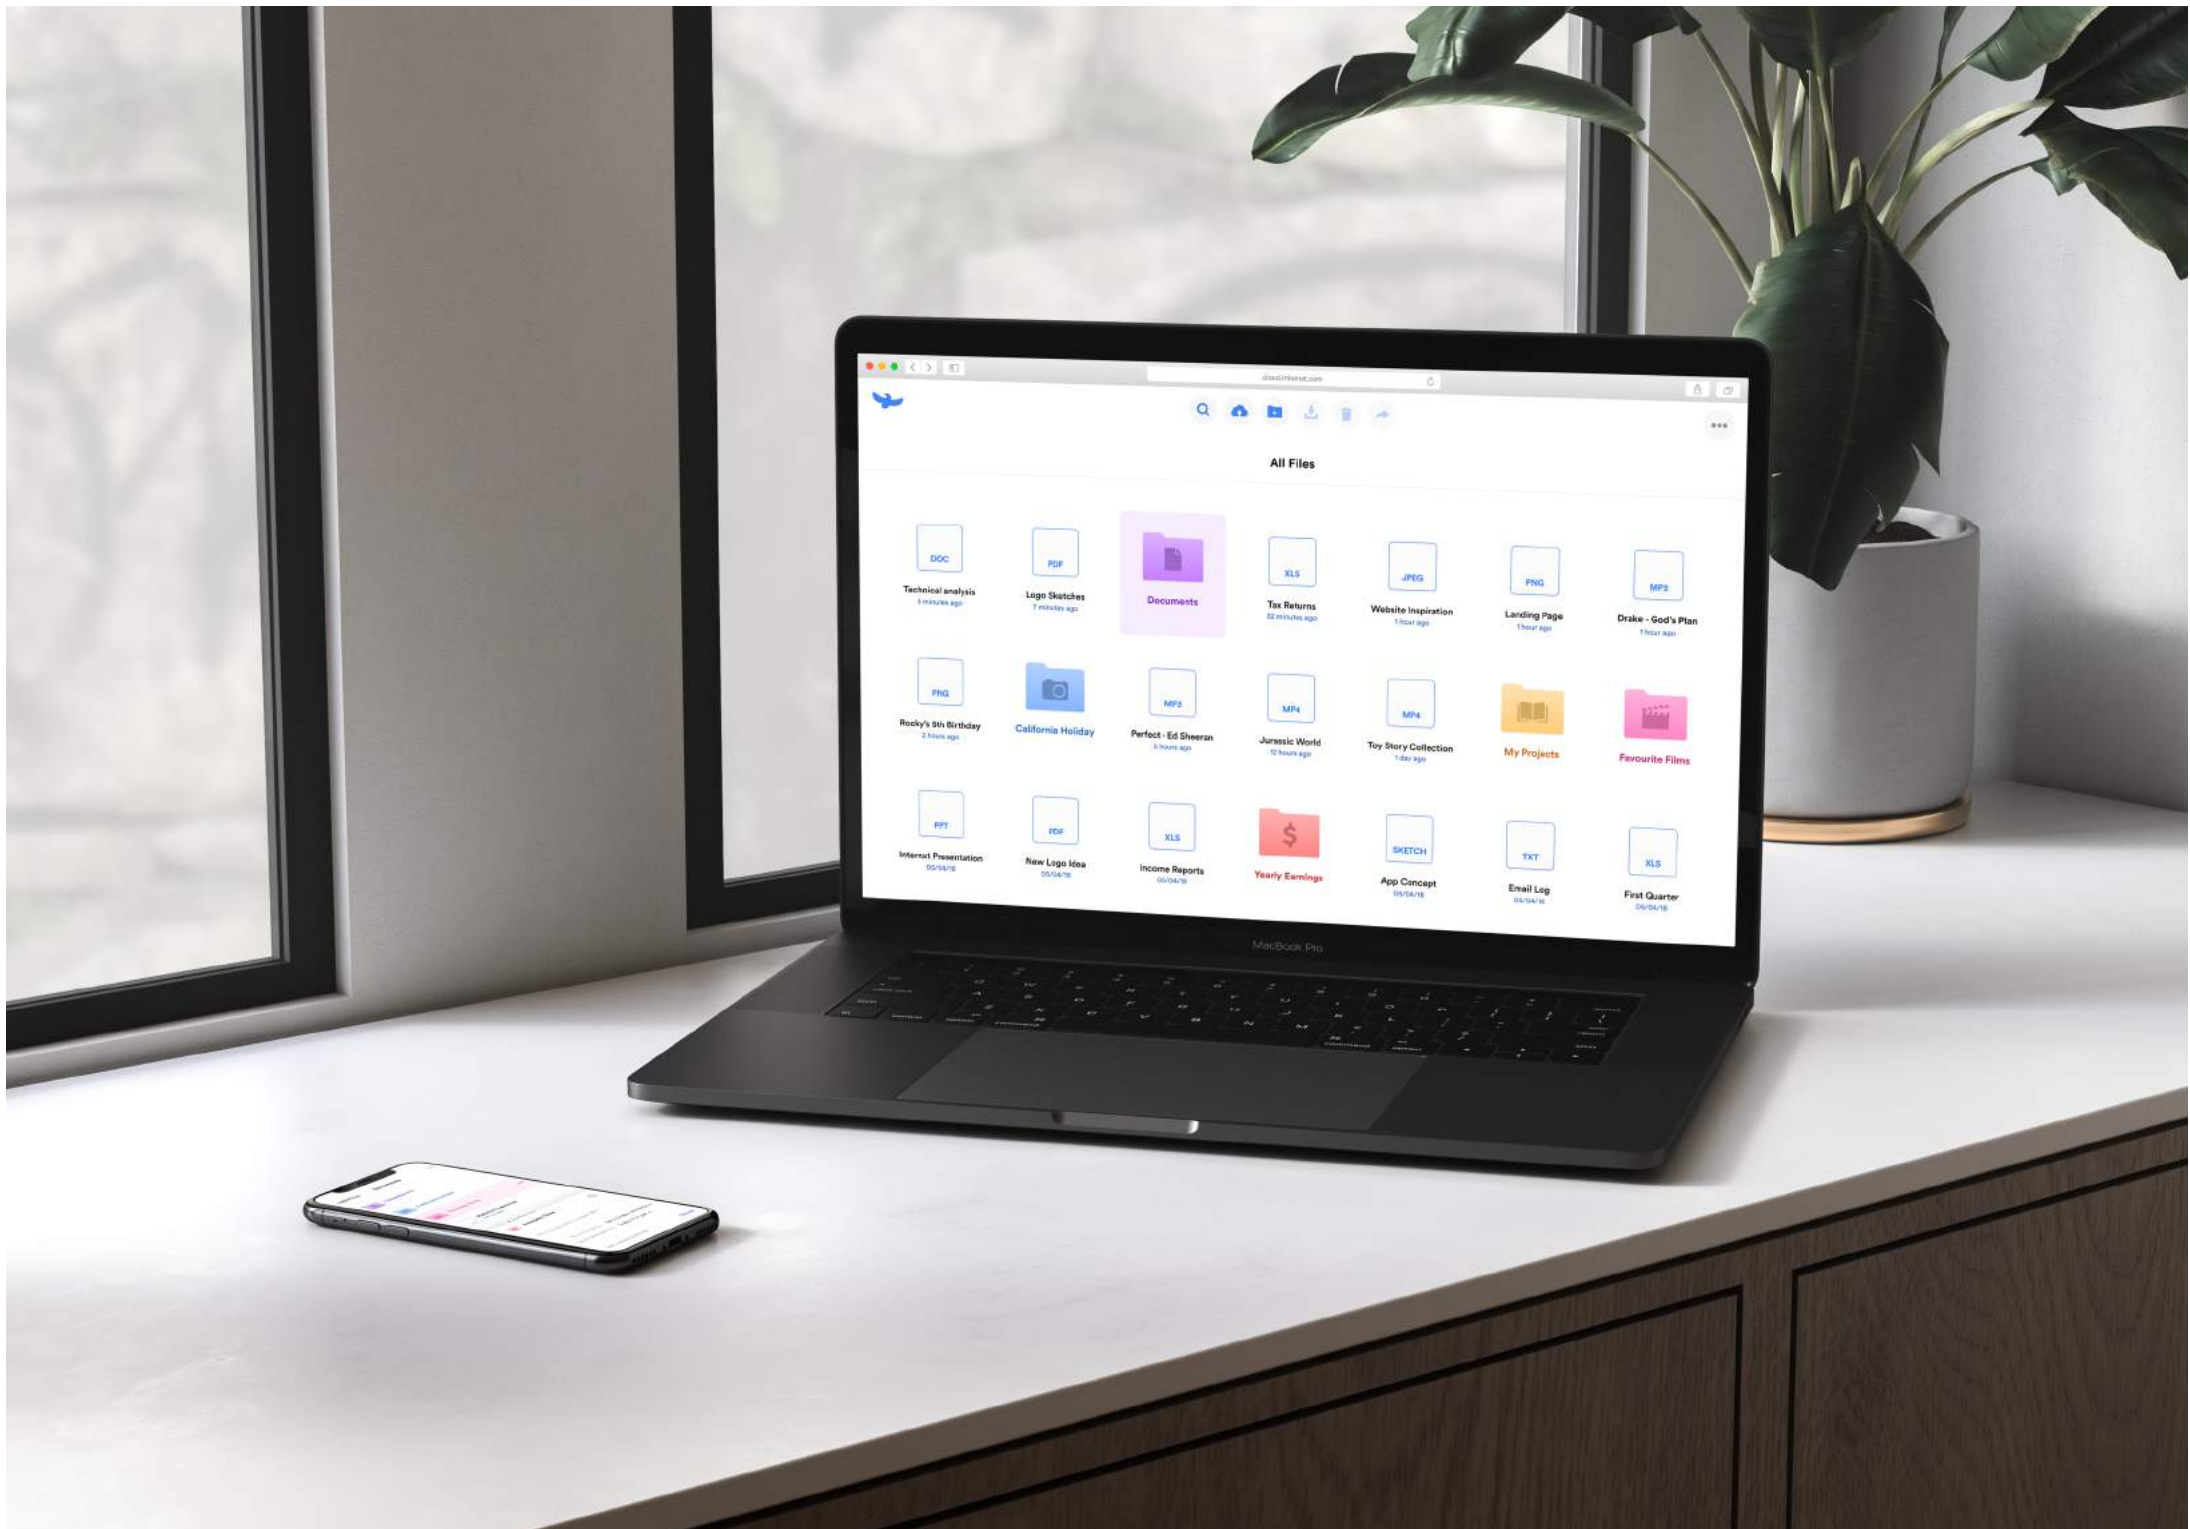

Free

100GB

€4.49 / month

1TB

€9.95 / month

Internxt is currently focused on continuously improving its product to increase the number of people these are best suitable for. We expect to spend €100,000 throughout 2019, in similar proportions to how we managed our budget in 2018.

By December 2019, we expect to have about 10,000 active customers, where 90% use our free 1GB plan, 9% use our 100GB plan and 1% use our 1TB plan. We also expect to release further services throughout 2019. On aggregate, we expect our revenues to equal €10,000/mo by December 2019, at which point we should break-even.

In order to increase our customer base, we make use of a variety of free marketing advertising, such as having an active social media profile, contacting startups and companies directly and making use of a referral program, amongst others. We will keep adding features to our products, and running security audits to build an increasing amount of trust. X Cloud's main competitive advantages include: higher security than any other comparable service (Dropbox, Tresorit, pCloud, Sync), 50% less energy-consuming, thus significantly being more eco-friendly. We also expect to decrease our pricing as we manage to decrease our costs.

Series A investment round 2019/2020.
